

Artificial Intelligence Usage Policy

Placement & Academic Preparation

Effective Immediately | All Students | Career Development Cell

Guiding Principle

AI may support your preparation — it may not represent you. Any output submitted or presented as your own work must reflect your genuine understanding, decisions, and voice. Violations are subject to disciplinary action as per institute regulations.

✓ Permitted Uses

The following uses of AI tools are permitted and encouraged as study and preparation aids.

1	Résumé refinement Rewrite résumé bullets for clarity and grammar.
2	Mock interviews Simulate mock interviews for personal practice.
3	Concept explanations Explain technical concepts such as DSA and OS topics in study mode.
4	Study schedules Generate placement-prep study schedules from a given syllabus.
5	Company briefs Produce one-page company-prep briefs — must be verified against the official company website.
6	Code review Review and suggest improvements to student-written code, with subsequent oral defence required.

✗ Prohibited Uses

The following uses are strictly prohibited and constitute academic or professional misconduct. Each prohibition includes an active detection mechanism.

1	Fabricated credentials AI may not be used to fabricate projects, internships, or experience that the student did not actually complete. Detection method: Mentor oral defence — the student must explain technical decisions in projects on their résumé, with a code walkthrough.
2	Voice cloning AI may not be used to clone the student's voice for asynchronous video interviews. Detection method: Recruiters verify via voice continuity checks; pre-recorded interviews increasingly require live segments.

3	Academic record tampering AI may not be used to generate or alter academic records, CGPA, marks, or transcripts. Detection method: All CGPA and marks claims are cross-referenced with the college academic portal.
4	Personal statements AI may not be used to write essays where the student's voice is the assessment criterion — this includes Statements of Purpose and motivation letters for direct hires. Detection method: Mentor reviews 2–3 historical writing samples and compares voice consistency with submitted content.

Policy Compliance & Acknowledgement

Students are expected to have read and understood this policy before engaging with any AI tool for placement or academic purposes. Lack of awareness does not exempt a student from disciplinary action.

Queries or appeals may be directed to the Career Development Cell or the academic mentor assigned to the student.

Enforcement

> The placement cell will conduct random oral defences on portfolio projects (sample 20% of placed students). Any unverifiable AI use that violates Prohibited Uses results in: first violation — written warning + portfolio re-defence within 7 days; second violation — placement support withdrawn for the current cycle. The placement cell acknowledges that not all violations are detectable; the policy relies in part on student integrity and the broader career consequences of misrepresentation.

***Trainer note:** The honesty in sentence 3 is what separates a real policy from a wishlist. Students respect honesty; they don't respect rules they know are unenforceable.*

***Acceptance:** Enforcement section drafted, with honest acknowledgement of detection limits.*
